

QueryRAG Sample Knowledge Document

QueryRAG is a document-grounded retrieval system. It retrieves relevant evidence from source documents.

The system preserves document and page provenance so users can inspect the evidence behind a response.

Retrieval Notes

Dense retrieval finds semantically related passages. Keyword retrieval finds exact names, identifiers

A hybrid retriever combines both approaches. QueryRAG will eventually use PostgreSQL full-text s

Testing Notes

A reliable RAG system should test parsing, chunking, retrieval, citations, insufficient-evidence beha

This sample document is intended for local development only.
